

## Me Myself

My name is Keeratika Chungyingruangrung or Nate. I'm now 12 years old. I've been studied at SJMIS for 6 years. SJMIS teachers help improve my English. Not only English, math, science, and other subject too. When I grow up, I want to be a Genetic engineer.

Genetic Engineer is all about science and math. It involves the use of recombinant techniques, but does not include traditional animal and plant breeding or mutagenesis. I want to be Genetic Engineer because, I love to stay in the lab, experiment something, using microscope to see something very interest. It's really fun!

There were people who don't know if there dream can become true or not. I'm one of those people. I don't know that my dream will be true or not. I love to study science but, I don't like math. Science and math are always together especially for Genetic Engineer. But, I believe that if I try my best, I can do it!

**FIGHTING!**
