

## My future

I never had thought about my future seriously yet. So I don't know what to write just right now so much. But if I can, I want to do the job related to the music or the mathematics. Because I love both of music and math. If I get the job related to the music, I want to be a cellist. Because cello is one of my best musical instrument in my mind.

And when I get the job related to the mathematics, I want to be a math teacher and teach the students many things about math. Because everyone think that math is one of the most bore subject in the school but for me, it's very exciting. When you solved the question that you did not know before without the teacher's helping, I am sure that you will feel accomplishment. And that kinds of feelings make mathematics more fun. That's why I want to be a math teacher. It is very hard question to choose only one thing between the music and the mathematics. For now, my opinion is like this. When I grow up, I will be a math teacher in the academy and I will be playing the cello only for the hobby. But still I am not sure if it is my final answer or not. I am going to think more about my future and then I will decide.
